

IBM TechXchange 2025

# AI in high-trust engineering domains

Daniel Moul  
Principal Product Manager  
IBM Engineering Lifecycle Management

Dallas  
October 29

Explore.  
Build.  
Launch.

GO/

In use cases beyond software development, using AI agents for task-level automations is a promising paradigm for increasing the accuracy, relevancy, and usefulness of Generative AI in these domains.

Agents are the foundation of the newest tool in the IBM Engineering Lifecycle Management product set.

This session will provide a short introduction to this new offering.

How can we apply imperfect tools in domains where correctness is essential?

# Trustworthiness is on the spectrum

# Risks and Challenges

## Engineering

Accuracy with  
tolerances

Safety

Professional  
obligations

Deep domain  
Expertise

## GenAI

Probabilistic

Black box

Bullshitter

Limited domain  
understanding <sup>1</sup>

<sup>1</sup>Humans tend to project reasoning skills on to GenAI models that exceed their true capabilities

"STOP ANTHROPOMORPHIZING INTERMEDIATE TOKENS AS REASONING/THINKING TRACES!", Subbarao Kambhampati et al., Arizona State University, May 2025 <https://arxiv.org/pdf/2504.09762>

# Agent-based systems

AI-driven (LLM)

Task-specific

Accurate

Composable

Extensible

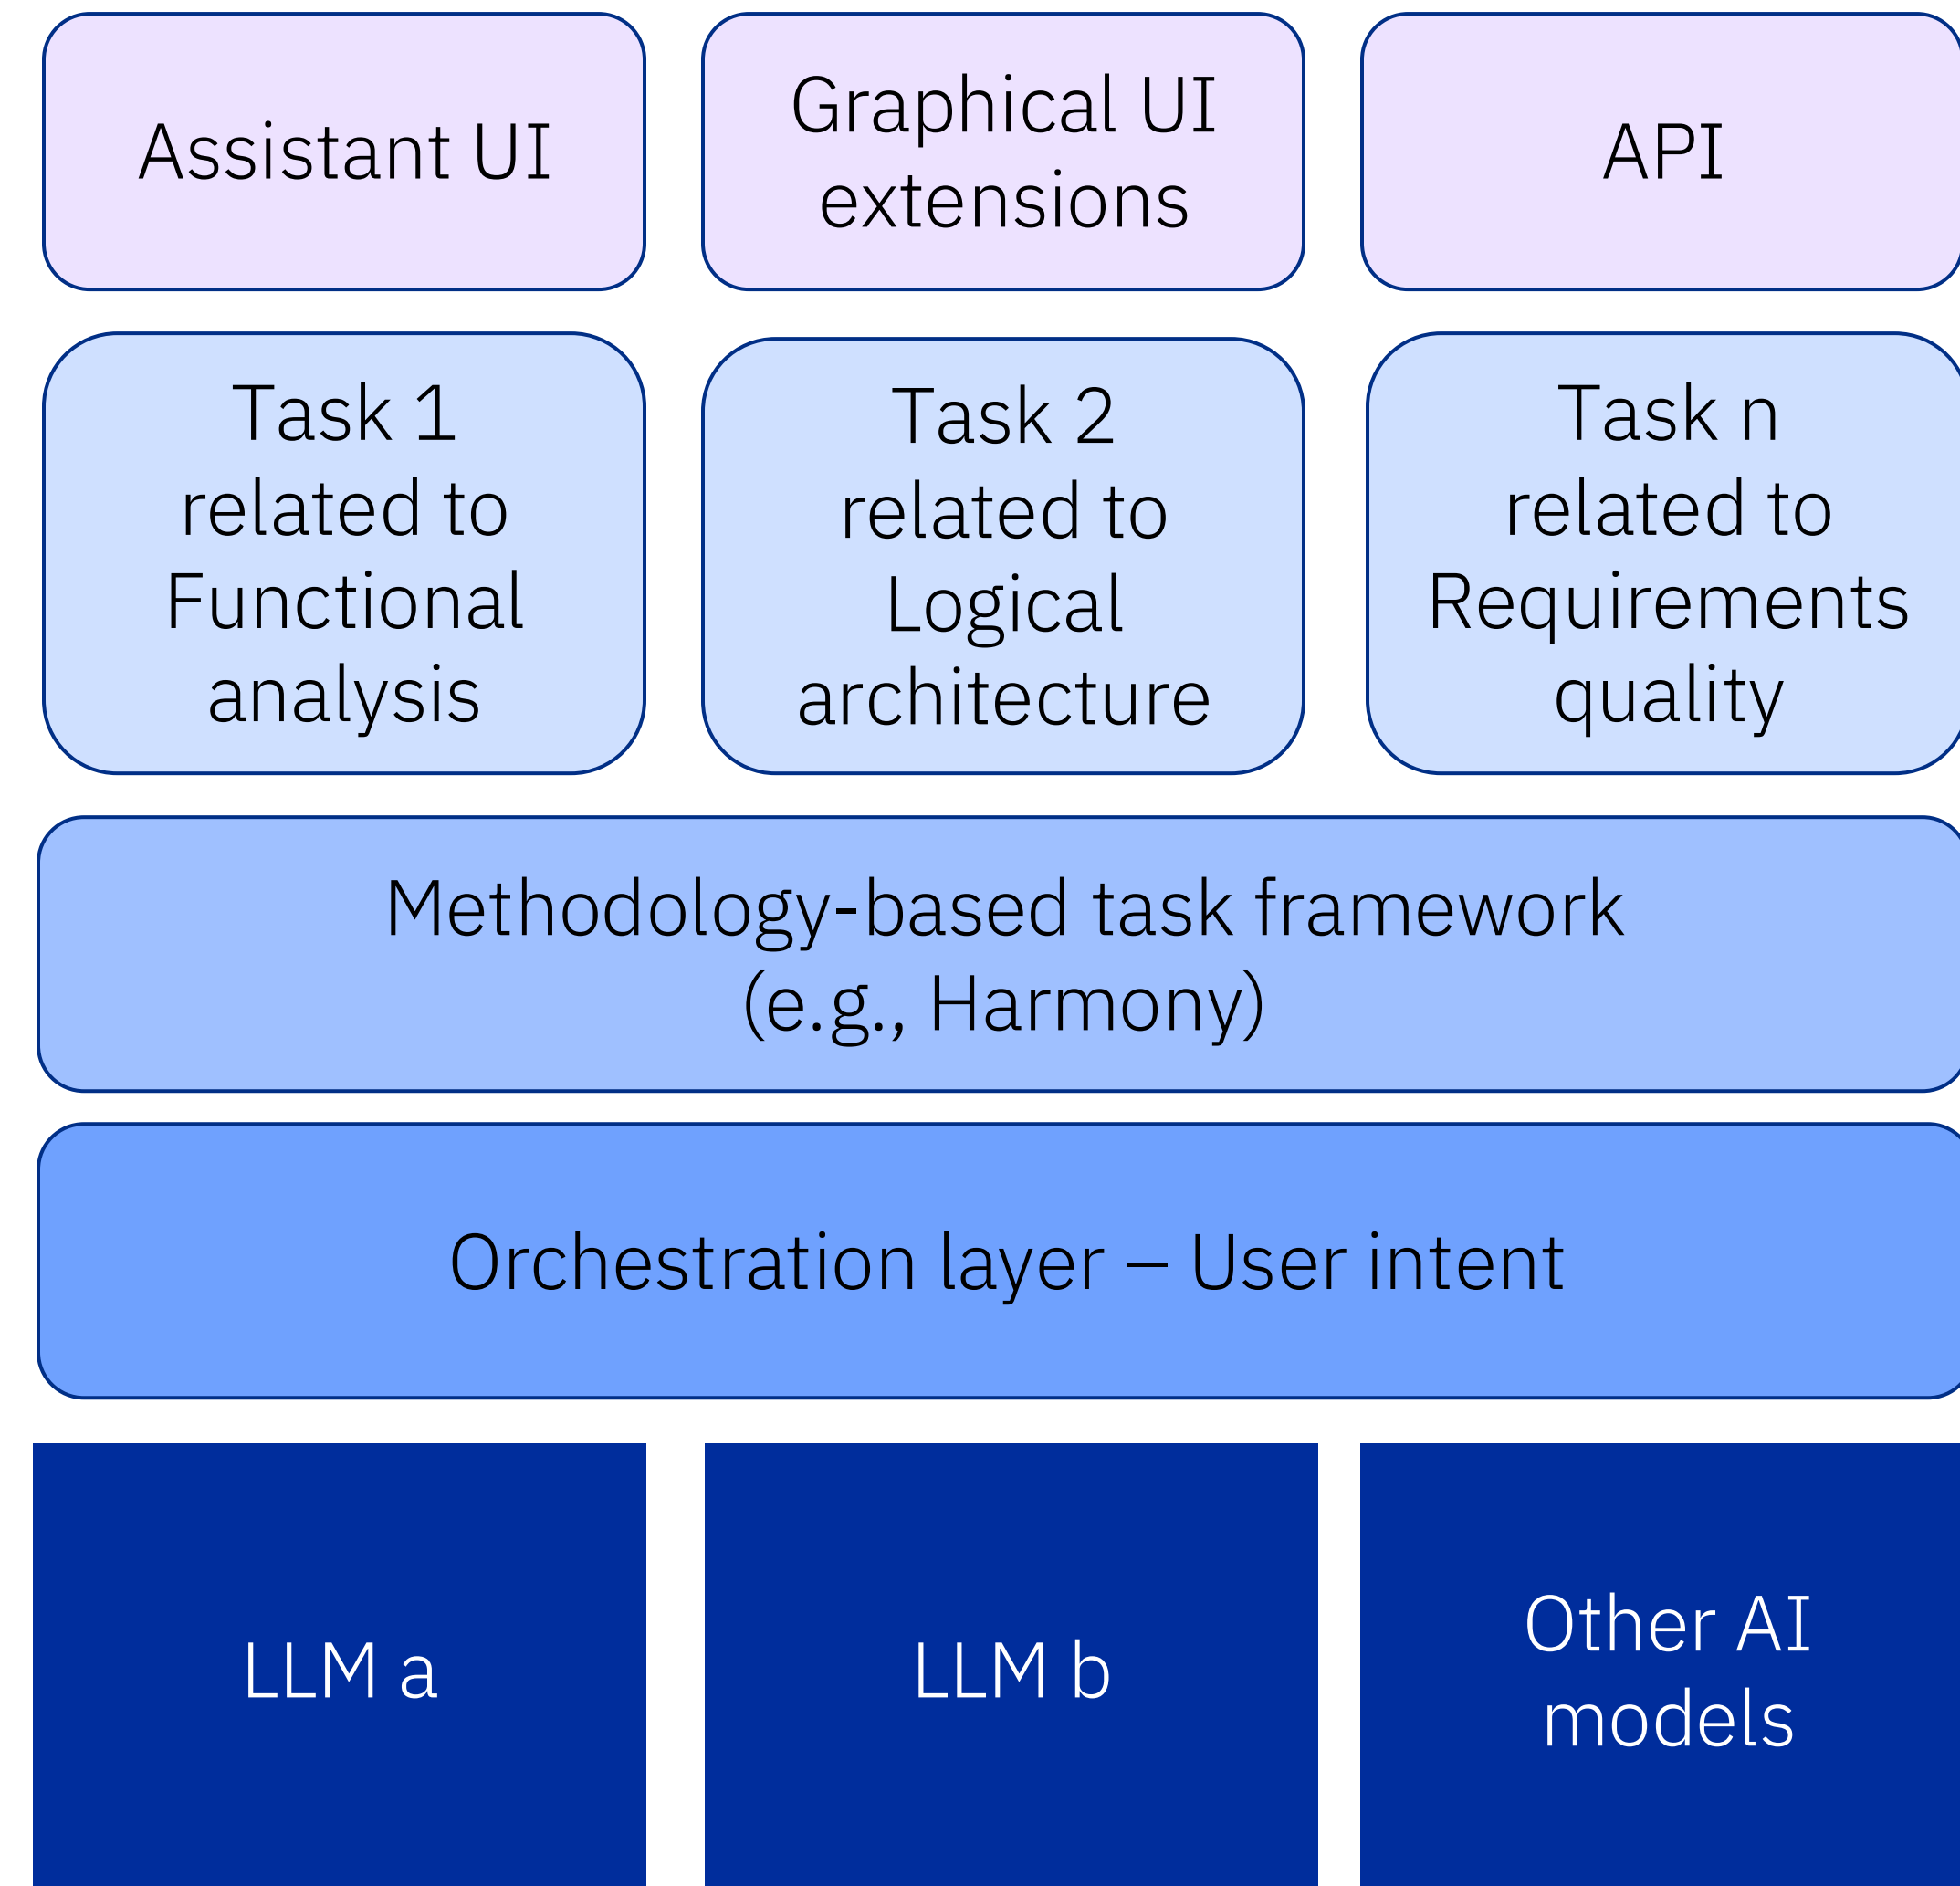

Human-centric

# Get in the right mindset: An agentic approach

Agent framework: dedicated agents plugged in to solve complex engineering problems

- Users interact with agents
- Agents decompose problems
- Agents implement known methodologies
- Agents interact with LLMs
- Agents connect to tools and data (APIs)
- Agents can be orchestrated together

Engineering efficiencies through AI-assisted automations

# IBM Engineering AI Hub 1.0

IBM Engineering AI Hub is a set of AI agents designed to help automate repetitive, time-consuming engineering tasks, freeing engineers to focus more on creative works, solving problems, and delivering complex, mission-critical, secure systems and software with speed.

**Task-level automations**  
Designed to automate tasks so your team can focus more on high-value work.

**Data-informed responses**  
Outputs grounded in your engineering data.

**Human-centered validation**  
AI recommends. You review and confirm. You're in the driver's seat.

**Enterprise ready**  
Designed to grow with your needs across engineering disciplines and use cases.

IBM Engineering AI Hub is an add-on to IBM Engineering Lifecycle Management with agents that address these use cases:

- 01

**Requirement quality analysis**

Analyzes requirements against industry standards to generate quality scores with detailed feedback, with recommendations for wording enhancements that raise requirement quality.

This helps engineers to build stronger requirements, teams to accelerate reviews, and managers to gain visibility into quality trends to identify risks early.
- 02

**Engineering Assistant**

Provides a natural language interface to requirements designed for conversational queries, topic-based searches, summaries, and translations.

This helps engineers access information faster, teams collaborate more effectively across global projects, and managers see improved alignment and reduced misinterpretation.
- 03

**Work Item synopsis**

Generates concise synopses of complex, long-running tasks, defects, and features, including key context, progress, and risks.

This allows engineers save time ramping up as they switch contexts, teams communicate more effectively, and managers gain clearer visibility into ongoing work.
- 04

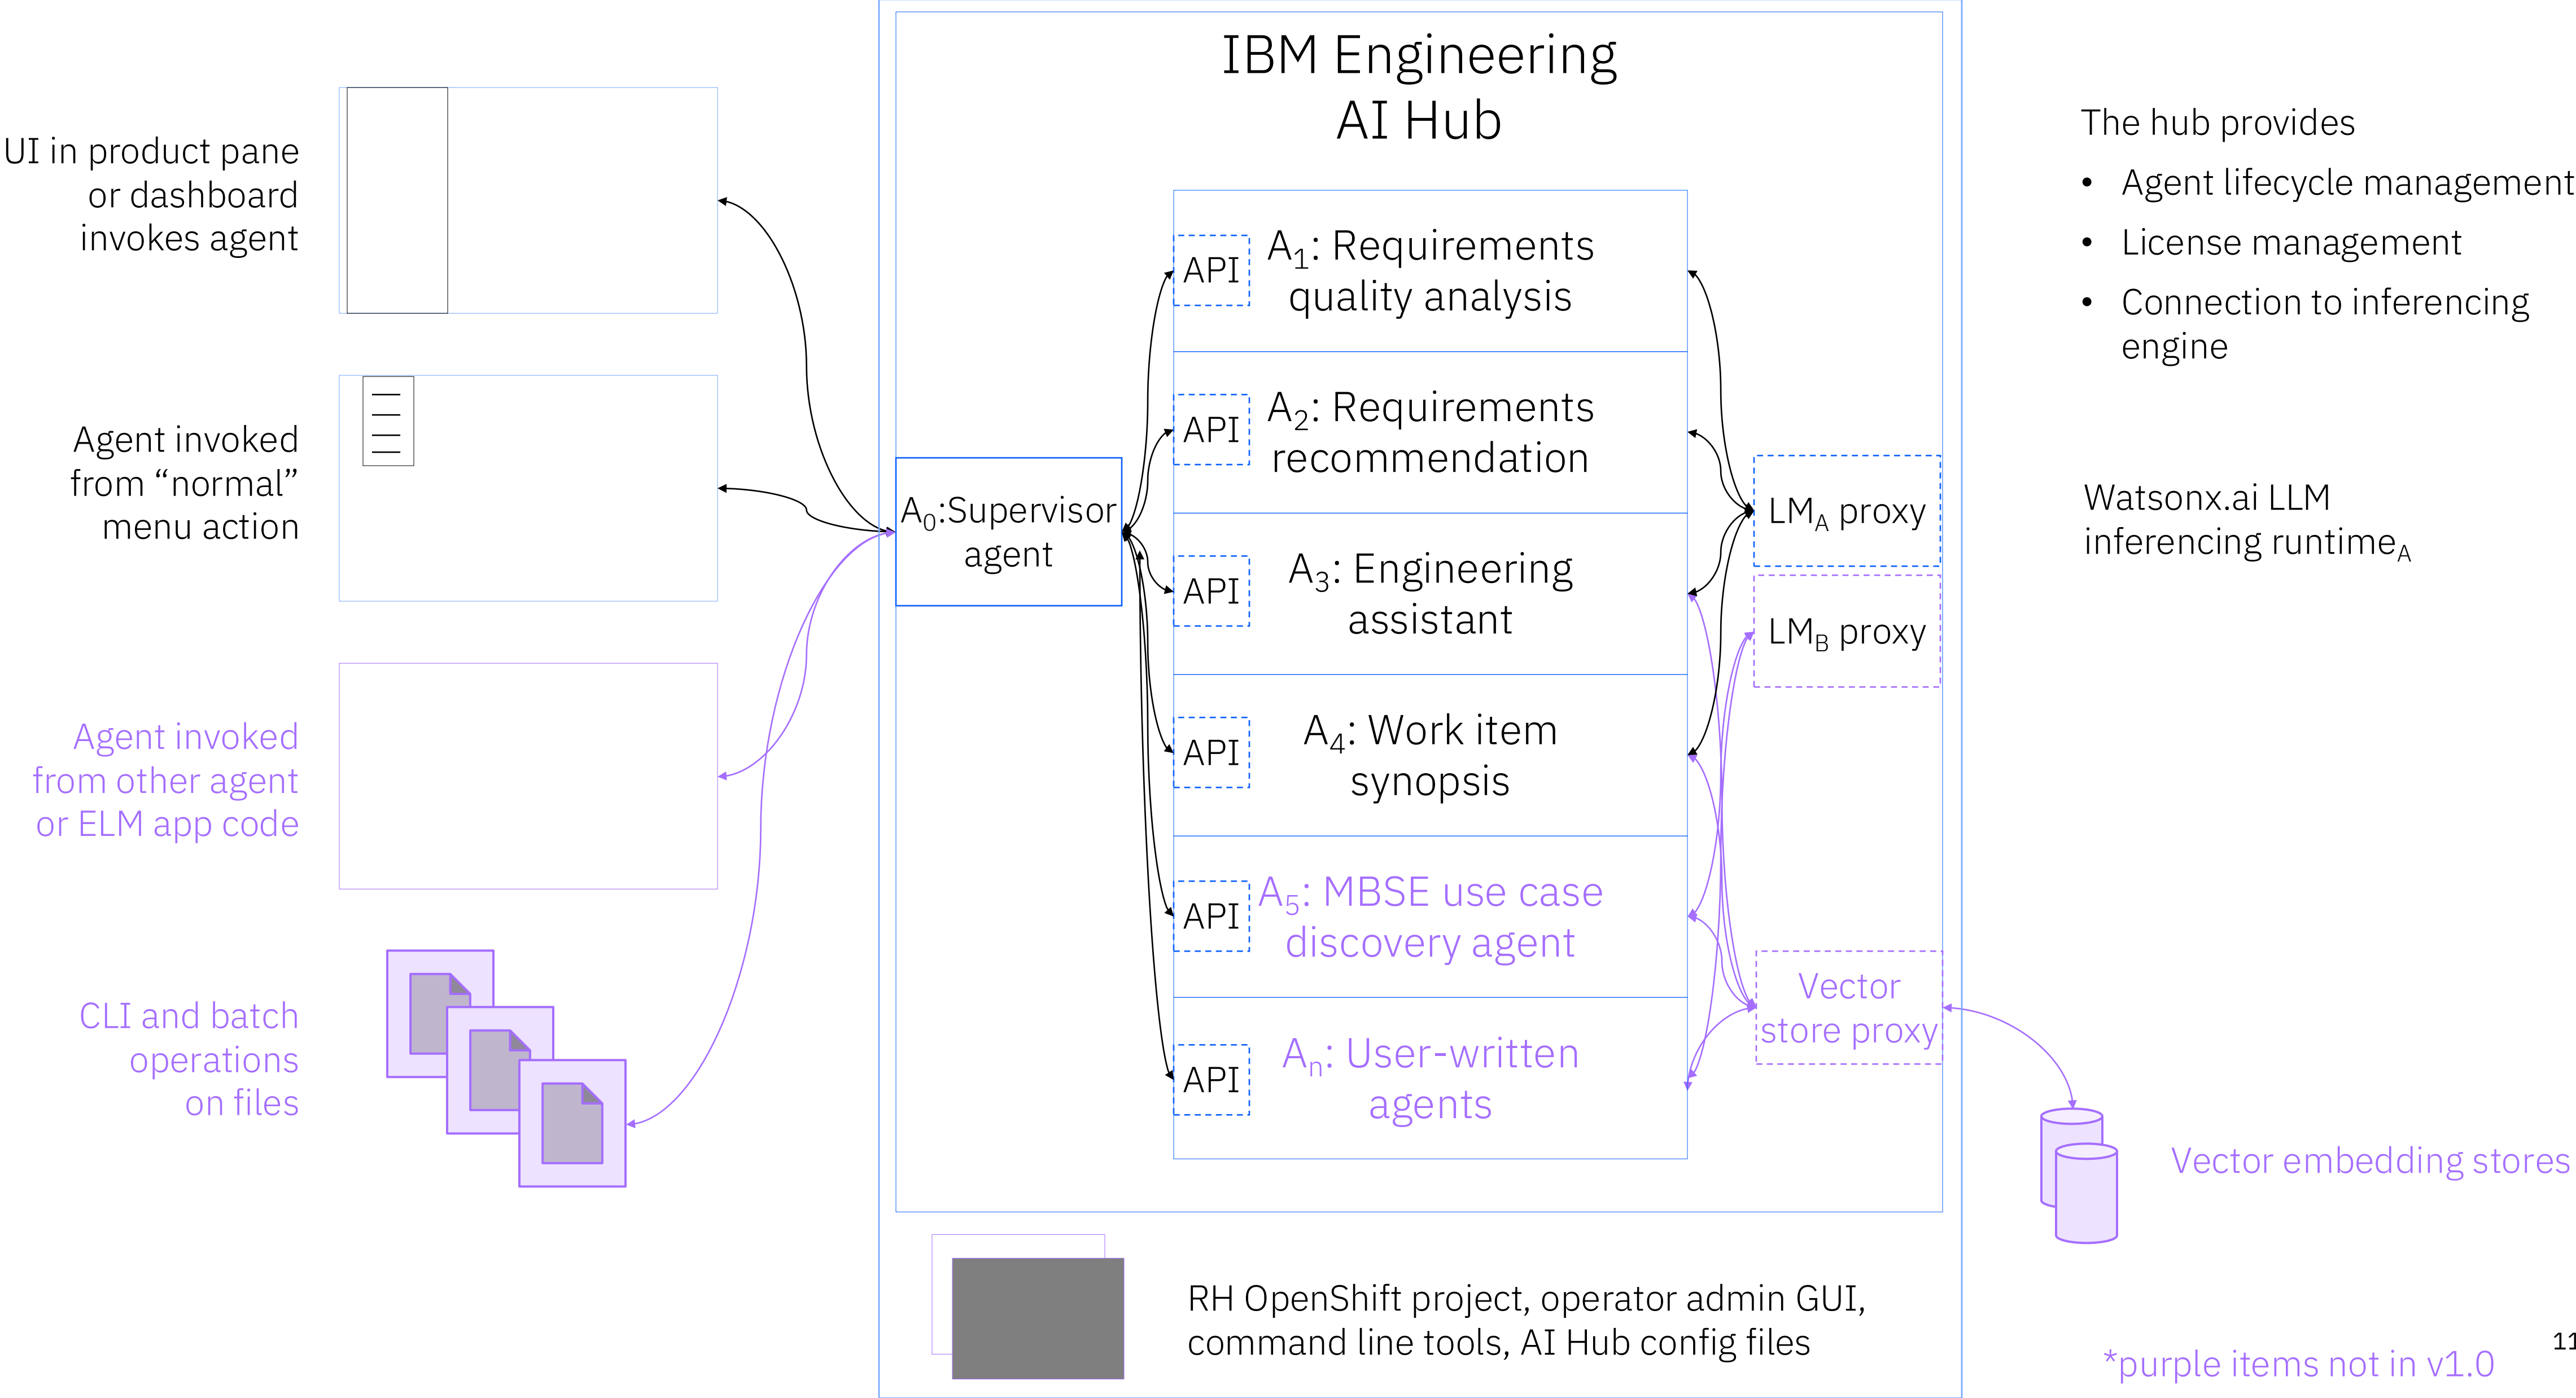

**MBSE use case discovery**

Identifies use cases and actors in natural language requirements and creates corresponding model elements and use case diagrams in SysML.

This allows engineers to move faster into the RFLP (requirements, functional, logical, physical) design framework.

Technical Preview

Concept\*

# Get in the right mindset: Anthropomorphisms are dangerous

## AI Foundation Models don't...

- ✗ Understand
- ✗ Reason
- ✗ Have empathy for their users
- ✗ Face the consequences

## People using models should...

- ✅ Understand
- ✅ Reason
- 💯 Have empathy for their users
- 💯 Be prepared to face the consequences

Get in the right mindset:

The hard-won  
engineering  
“laws of gravity”  
still apply.
